

PROTECTIVE BUMPERS

Posts for bumpers – SW 080.100

Bumpers are used to protect the walls, store furniture, glass cases and other equipment exposed to the impact of shopping carts. Posts for bumpers are made from high quality plastic, which is resistant to mechanical blows. Posts are mounted to firm floor by $\varnothing 14 \times 90$ pegs and $\varnothing 9 \times 110$ screws. Posts for bumpers are designed to fit with $\varnothing 40 \times 2$ pipes made from acid-proof steel. It is recommended that posts are mounted at a distance of 1500 mm from each other. Cornering around the protected object is achieved by using pipe-spring and spring-pipe connectors. To connect straight sections, pipe-pipe connectors are used. Posts and connectors are white grey in colour.
