

LEFT-SIDED ROTATING GATE WITH ANTI-PANIC SYSTEM – SW 010.010

Left-sided rotating gate constitutes a very important element of the whole system for directing the customer in commercial organizations, etc. It allows for organized traffic of people in a given direction and eliminates collision. Rotating gate is equipped with "anti-panic" system, which opens the entrance completely under the pressure of people evacuating hazardous places. The basic element of a rotating gate is the unit with a revolving head, which is equipped with four arms. The unit is connected with the anti-panic post through the arms. All elements of the equipment are made of steel and coated with nickel and chromium. Rotating gate can only be used in closed places with firm floors and should be mounted to the floor by three Ø8x120 screws and pegs Ø12x100. Weight – 24 kg.

Operating principles of the anti-panic system
